

Deadline of the Presentation File of Your Course Project

The Presentation file of your course project is due at Canvas (either pptx or pdf version will be fine). **One team per submission.**

1. There are no specific guidelines on the presentations, and the commonsense applies, e.g., write all team members' names somewhere on the first slide, highlight your problem, explain your data set, present your main ideas/methods, and conclusions.

Some students might ask how many slides they should prepare in the presentation file. To give you a rough idea, you or your team might want to prepare for the slides in such a way that each teammate member can present about 3 minutes (possibly with a standard deviation of 0.5 minutes), etc.

2. **Optional, not Required, no credits, no penalty, no nothing:** The team is also encouraged to submit a recorded video/voice oral presentation if feasible. We understand that it might be difficult to generate such video/voice presentation, and thus **this is optional, not required.**

Peer review comments: each student will be required to review three other projects and provide detailed peer review comments.

The TAs will assign the grades to all projects, based on the following grading guidelines (please note that the TAs keep the right to assign any other reasonable grades):

- 10 points (=100%, A+) if the presentation file is clear, the project sounds interesting, and the conclusion sounds reasonable, etc.
- 9 points (=90%, A) if there are some minor concerns on the presentation file
- 8 points (=80%, B) if there are some major concerns on the presentation file
- 7 points (=70%, C) if the presentation file contains some critical technique errors or has poor presentation
- 6 points (=60%, D) if the presentation file is not understandable or sloppy
- 0 points if no submission

Grading: The course project will have a weight of $25\% = 3\%$ (proposal) + 10% (presentation) + 12% (written report) in your final course grade. In general, the ideal is for all team members to receive the same grade on the final project. However, individual deductions from the team's final project grade will be assessed for failing to contribute a fair and significant share to the team's project, as determined by the teammates' peer evaluation and the instructor.
